

February 27, 2025

ADVISORY

Restricted Use Pesticide Notification System

California Citrus Industry,

The California Citrus Quality Council is providing information to the industry on reporting requirements for applications of restricted use pesticides. According to the California of Pesticide Regulation:

The California Department of Pesticide Regulation (DPR) is anticipating the statewide launch of **SprayDays California** on **March 24, 2025**. SprayDays California is a first-of-its-kind statewide system designed to provide transparent, accessible and timely notifications and information about the application of specific pesticides, called "restricted material pesticides," used on farms.

The regulations that support the implementation of SprayDays California go into effect on February 24, 2025, requiring growers and applicators to electronically submit Notices of Intent (NOIs) for restricted material pesticide applications in production agriculture via CalAgPermits or third-party partner platforms. A DPR information sheet is available in [English](#) and [Spanish](#) for compliance guidance.

SprayDays California will provide information online, and through email and text message notifications, 48 hours before the intended use of soil fumigants, a type of restricted material pesticide, and 24 hours before the intended use of other restricted material pesticides used on farms. Website visitors can search for scheduled applications anonymously using a map or enter any California postal address to view applications planned within a one-square-mile area. Users can also opt in to notifications about planned applications near a specified address using a mobile phone number or email.

DPR will provide updates on its website in advance of the statewide launch of SprayDays California.

Please contact me by telephone at (530) 885-1894 or via e-mail at jcranney@ccqc.org if you have questions or need additional information.

Regards,
Jim
